TetraBond

TetraBond

TetraBond is a stencil system that optimally supports and clamps the metal stencil. Installing and removing in the self-mounting-systems is easy and safe. This helps reducing setup times if frequent product changes are required. The plate is enclosed in a thin extruded single-piece aluminium profile. The TetraBond stencil system has been developed for use in Tetra mounting frames. A large number of mounting frames currently available on the market are compatible with TetraBond. All technologies for stencil manufacture (laser cutting, step technology,

electro polishing, galvanic structure and solid nickel laser-cut) are unrestrictedly available for the TetraBond system. The system can be taken out of the self-mounting system easily and can then be cleaned directly in a cleaning plant; an additional washing frame is not required. The stiff frame reduces the damage potential during handling of the stencils to a minimum. The frames are available in the colours green and black. Lead-free and lead-containing applications can thus be safely distinguished. Stencils in the TetraBond system allow for space-saving storage.

TetraBond: The professional alternative
for use for Alpha Tetra mounting systems

TetraBond stencils can be delivered for the following mounting frame sizes:

17" x 17"

Stencil size in mm: 406 x 406

23" x 29"

Stencil size in mm: 558 x 710

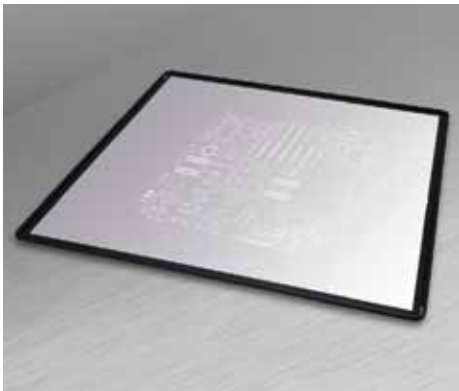

23" x 23"

Stencil size in mm: 558 x 558

29" x 29"

Stencil size in mm: 710 x 710

Other sizes are available upon request.
